No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                            1 MDEADRRILERRCRERIVEEL.....YKQMPGCFNFLRKKLFFKTS 416

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  COMPUTER READBALE FORM:
MEDIUM TYPE: Floppy disk
COMPUTER: IBM PC Compatible
COMPUTER: TBM PC Compatible
OFREATING SYSTEM: PC-DOS/MS-DOS
SOFTWARE: Patentin Release #1.0, Version #1.25
CURRENT APPLICATION NOMBER: US/10/059,749
FILING DATE: 29-Jan-2002
CLASSIFICATION: <UNKnown>
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        CORRESPONDENCE ADDRESS:
ADDRESSEE: Campbell & Flores LLP
STREET: 4370 La Jolla Village Drive, Suite 700
MEDIUM TYPE: Floppy disk
COMPUTER: IBM PC compatible
OPERATING SYSTEM: PC-DOS/MS-DOS
SOFTWARE: PatentIn Release #1.0, Version #1.25
CURRENT APPLICATION DATA:
APPLICATION NUMBER: US/08/865,579
FILING DATE: 29-MAY-1997
CLASSIFICATION: 435
ATTORNEY/AGBNT INFORMATION:
NAME: Campbell, Cathryn A.
REGISTRATION NUMBER: P-ID 2180

Patent No. 6686459;
GENERAL INFORMATION:
APPLICANT: Alnemri, Emad S.;
APPLICANT: Intwack, Gerald
APPLICANT: Intwack, Gerald
APPLICANT: Tomaselli, Kevin
TITLE OF INVENTION: Nucleic Acids Encoding and Methods of Use
TITLE OF INVENTION: Nucleic Acids Encoding and Methods of Use
CORRESPONDENCE ADDRESS:
ADDRESSEE: Campbell and Flores
STREET: 4370 La Jolla Village Drive, Suite 700
CITY: San Diego
STRATE: California
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Score 10; DB 4; Length 303;

Patent No. US20020076793A1
GENERAL INFORMATION:
APPLICANT: He, Wei-Wu et al.
TITLE OF INVENTION: Interleukin-1 Beta Converting Enzyme
Like Apoptosis Protease 3 and 4
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          2.4%; Score 10; DB 9; Length 163;

                                                                                This is a human interleukin-1 beta converting enzyme apoptosis protease-6 (ICE LAP-6) polypeptide. The ICE LAP-6 polypeptide and agonists to the polypeptide can be used to induce apoptosis. 6.g. as an antiviral or antitumour agent, control embryonic development and tissue homeostasis and the roles of such factors in dysfunction and disease. Antagonists which inhibit the activity of the ICE LAP-6 polypeptide can be used to treat, Albreimer's or Parkinson's disease, rheumatchid arthritis, septic shock, sepsis, stroke, chronic, acute or central nervous system inflammation, osteoporosis, ischaemia reperfusion injury, cell death associated with cardiovascular disease, polycystic kidney disease, apoptosis of endothelial cells in cardiovascular disease, degenerative liver disease, multiple solerosis, cerebellar degeneration, ischaemic injury, myccardial infarction, acquired immunodeficiency syndrome (AIDS), myelodysplastic syndrome, aplastic anaemia, male pattern baldness and head injury damage. They can also be used for detection and diagnosis
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              120
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              120

known as interleukin-1 converting enzyme (ICE) LAP6 and Moh6. Caspases

known as interleukin-1 converting enzyme (ICE) LAP6 and Moh6. Caspases

are a family of cysteine proteases, that participate in the initiation

and execution of apoptosis. Caspases exist as pro-enzymes, activated by

cleavage into a large and small subunit, occurring after specific

sapartic acid residues within the pro-enzyme sequence. The present

invention relates to a method for functional cloning of genes encoding

proteins or enzymes involved in proteolytic cleavage. The invention is

proteins or enzymes involved in proteolytic cleavage into flanked by sequences encoding

caspase subunits. A fusion polypeptide comprising the coding

caspase subunit, separated by a cleavage site flanked by sequences encoding

caspase subunit, separated by a cleavage site in or associated in nature,

is useful for cloning gene encoding enzymes involved in proteolytic

cleavage. An expression cassette containing fusion polypeptide is used to

identify a mutant cell line deficient in an enzyme of interest and is

cleavage. An expression of proliferation or metastases

cleavage in the uncontained by overexpression of a polypeptide (e.g.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Novel fusion polypeptide comprising first and second caspase subunit separated by cleavage site not associated in nature with caspase subunit, useful for cloning gene encoding enzymes involved in proteolytic
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        /note= "Encoded by GCA; Ala is present in the sequence shown in page 105-107 (AAE00620)"

The invention relates to nucleic acid molecules encoding rev-caspases.

Rev-caspases are cysteine proteages that specifically cleave proteins after Asp residues and is expressed as a zymogen, in which the small subunit is N-terminal to a large subunit. A gene delivery vehicle comprising a rev-caspase coding sequence is useful for the treatment of cancer, where the gene delivery vehicle is internalised by tunnour cells. The gene delivery vehicle is internalised by tunnour cells. The gene delivery vehicle can also be used to treat autoimmune diseases. Cells transfected with a rev-caspase expressing vector can be used in identification of inhibitors or enhancers of caspase-mediated apoptosis. In vitro translated rev-caspase can be used to identify an inhibitor or enhancer of caspase processing activity. Caspase inhibitors are useful for treating neurodegenerative diseases as well as for inhibiting apoptosis in the heart following myocardial infarction. Sequences

AXX81217 - AXX81226 represent human caspase genes encoding caspase 1-10
                                                                                                                                                                                                                                                                                                                                                                                                                                 0
